Roll No:- _____

-
1. Which of the following are variables controlling soil development? (Select one or more)
a. composition of parent b. climate c. topography d. biological activity
e. time
 2. If the parental material is rock characteristic of a given region, then the resulting soil is referred to as
a. transported b. elevated c. superposed d. residual e. thick
 3. If the parental material was brought into a given region by wind, glaciers, or water, then the resulting soil is referred to as
a. transported b. thin c. superposed d. residual e. thick
 4. What does the term topography refer to?
 5. Soils that develop on steep slopes are subjected to greater erosional stresses than soils developed on gentler slopes. True or false
 6. Soils developed in flat lying regions are typically _____ than those developed in sloping regions.
 7. Two important variables of climate are _____ and _____.
 8. In the conterminous United States average annual temperature generally increases from

- a. north to south b. south to north c. west to east d. east to west
e. none of the above

9. Which of the following areas within the conterminous United States has the largest average annual precipitation

- a. SE b. SW c. NE d. mid-continent e. south

10. In general, calcite and halite (salt) will not be found in soils located in the _____ United States because of the relatively _____ annual precipitation.

11. The climatic conditions that are most conducive for the formation of calcite and/or halite in a soil are

- a. high precipitation – low temperature
b. high precipitation – high temperature
c. high precipitation – moderate temperature
d. low precipitation – high temperature
e. none of the above

12. In the continental United States where would you most expect to find calcite and/or salts in a soil? Why?

13. Increasing temperature increases the rate ofreaction in a soil.

14. Deposition or precipitation of clay-sized particles or minerals, respectively, within a master horizon is referred to as _____.

15 In the following illustration please fill in the missing names of the master horizons in the blanks labeled (a) through (f)

16. What master horizon is characterized by organic debris in various stages of decay?

17. What master horizon is characterized by humus mixed with mineral and rock fragments?

18. What master horizon is characterized by the accumulation of clay-sized particles?

19. What master horizon is characterized by recognizable pieces of bed rock in various stages of weathering?

20. What master horizon is characterized by unweathered bedrock?
21. What are the names of the 12 major soil orders of Soil Taxonomy?
22. Of the 12 major soil orders, two are characterized by minor development of master horizons? What are these two soil orders?
23. Which is characteristically a very young soil lacking horizon development with the exception of an A horizon?
24. What soil order underlies vast farmlands in the mid-continent region of the United States?
25. What soil order characteristically has calcite and/or halite in the B horizon and is common throughout the arid SW United States?

Soil Analysis Programme Outcomes

-
1. Got experience on advanced analytical and instrumentation methods in the estimation of soil, water, fertilizer and agricultural chemicals Capable of handling advanced instruments-HPLC,AAS, GC etc Gained knowledge on separation techniques.
 2. Learnt about tracer techniques – Radiotracer measurements Accumulation of toxic elements and nutrient deficiencies in submerged soil is very well understood.
 3. Soil conservation is key to environmental sustainability: It helps protect natural resources and watersheds, restores habitats for plants and wildlife, improves water quality, and makes soil healthier.
 4. Soil conservation also creates economic opportunity. Soil tests are used to determine the soil's nutrient level and pH content.
 5. Armed with this information, farmers can define the quantity of fertiliser and the exact type that is needed for application to improve the soil on your farm.
 6. This is essential because fertile soils are necessary to grow healthy crops.

Soil Analysis Programme Outcomes

1. Got experience on advanced analytical and instrumentation methods in the estimation of soil, water, fertilizer and agricultural chemicals Capable of handling advanced instruments-HPLC, AAS, GC etc Gained knowledge on separation techniques.
2. Learnt about tracer techniques – Radiotracer measurements Accumulation of toxic elements and nutrient deficiencies in submerged soil is very well understood.
3. Soil conservation is key to environmental sustainability: It helps protect natural resources and watersheds, restores habitats for plants and wildlife, improves water quality, and makes soil healthier.
4. Soil conservation also creates economic opportunity. Soil tests are used to determine the soil's nutrient level and pH content.
5. Armed with this information, farmers can define the quantity of fertiliser and the exact type that is needed for application to improve the soil on your farm.
6. This is essential because fertile soils are necessary to grow healthy crops .

Soil Analysis Programme Outcomes

1. Got experience on advanced analytical and instrumentation methods in the estimation of soil, water, fertilizer and agricultural chemicals Capable of handling advanced instruments-HPLC,AAS, GC etc Gained knowledge on separation techniques.
2. Learnt about tracer techniques – Radiotracer measurements Accumulation of toxic elements and nutrient deficiencies in submerged soil is very well understood.
3. Soil conservation is key to environmental sustainability: It helps protect natural resources and watersheds, restores habitats for plants and wildlife, improves water quality, and makes soil healthier.
4. Soil conservation also creates economic opportunity.Soil tests are used to determine the soil's nutrient level and pH content.
5. Armed with this information, farmers can define the quantity of fertiliser and the exact type that is needed for application to improve the soil on your farm.
6. This is essential because fertile soils are necessary to grow healthy crops .

Soil Analysis Programme Outcomes

1. Got experience on advanced analytical and instrumentation methods in the estimation of soil, water, fertilizer and agricultural chemicals Capable of handling advanced instruments-HPLC, AAS, GC etc. Gained knowledge on separation techniques.
2. Learnt about tracer techniques – Radiotracer measurements Accumulation of toxic elements and nutrient deficiencies in submerged soil is very well understood.
3. Soil conservation is key to environmental sustainability: It helps protect natural resources and watersheds, restores habitats for plants and wildlife, improves water quality, and makes soil healthier.
4. Soil conservation also creates economic opportunity. Soil tests are used to determine the soil's nutrient level and pH content.
5. Armed with this information, farmers can define the quantity of fertiliser and the exact type that is needed for application to improve the soil on your farm.
6. This is essential because fertile soils are necessary to grow healthy crops.
