The need of testing the soil before farming let the farmers understand what amount of nutrients are already present in soil and how much extra is needed. It helps in bringing increased uniformity of nutrient availability across the field for more uniform crop growth. The benefits of soil testing helps in selecting the right fertilizer and its quantity for optimum festination. It helps farmer in making smart data driven decisions.it helps in getting higher yield of crops.it helps in optimizing the fertilizer expenditure. The visit completed with the observation of certain presentations and data given. It was really a grateful visit.
